## DETAILED ACTION

### *Specification*

1. The disclosure is objected to because of the following informalities: On pp. 14, line 23, "velocitys" should be corrected with "velocities." Applicant must review the specification and claims for any and all grammatical, typographical and spelling errors.

Appropriate correction is required.

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 21- 35 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 3, 6 and 19 of U.S. Patent No. 6,664,591. Although the conflicting claims are not identical, they are not patentably distinct from each other because the limitations regarding the voltage transiently applied to the device simply recite an intended use of the claimed invention. Terms that simply set forth the intended use, a property

inherent in or a function, do not differentiate the claimed composition of these elements from those known to prior art.

The behavior of the semiconductor device is dependent upon the structure of the semiconductor device. In this instance, the claimed structure is a first base layer, a second base layer, source layer, gate electrode and drain layer. The physical structure that drives the injection efficiency of the hole current (Applicant's specification pp. 8, lines 16-36) as well as dictates the behavior of the circuit when the voltage is transiently applied is dependent upon the dopant concentration of the drain layer, the buffer layer, and the thickness of the drain layer. These limitations are clearly expressed in the patented claims.
